

Correct Procedures **Warning**

“Blueline Technologies, LLC warrants that any Blueline product will maintain its structural integrity and will not deteriorate under normal exposure to fuels, water, and other environmental conditions present within a sump for a period of 3 years from the date of installation. This warranty is contingent on the installation being performed by a certified and trained installer using the Blueline Technologies installation instructions.”

Gaskets Materials, Fillers and Bonders

Blueline will only warrant our fittings if they are used with the correct Blueline supplied bonders. Be aware that different applications require different bonders. Any incorrect combination will void all Blueline warranties and it is the Contractors responsibility to use the correct fitting with the correct bonder as laid out clearly in these instructions

Angled Entries

Any fitting installed with a pipe or conduit at an angle greater than 12 degrees from straight (straight is defined as 90 degrees from the sump wall) will void the Blueline warranty

Anti corrosion spray

Any fitting installed on the outside of the sump not sprayed with Blueline supplied Anti corrosion spray (part# ACB 026) will void the warranty. Spraying certain soil barriers and detergent soaps and other aggressive compounds directly on the Pellethane boots is not recommended as they can contain aggressive and corrosive key tones and other toxic compounds which cannot evaporate when buried in backfill and may cause damage to the surface of the Pellethane outer boot.

Brine

Brine is a highly corrosive solution especially in an oxygenated environment with metallic clamps and fittings. If Brine is the preferred media for any continuously monitored system Blueline recommend use of KFDR fittings and compulsory use of Anti corrosion spray on all clamps and internal fastening bolts before the system is primed.
