touch free vehicle wash system from Ryko.

Gantry-Mounted Presoak

Aluminum Frame

Ultrasonic Vehicle Detection

High Volume Quiet Dryers

Personalized Image

Low Maintenance

High Impact Spray

Remote Diagnostics

Multi-Stage Pump

Stainless Steel Covers

Foaming Pre-Soak

Vehicle is covered with a layer of pre-soak detergent to loosen dirt and road grime, giving a more thorough wash. Two-step chemical capabilities insure satisfying wash results for extremely hard to clean vehicles.

Side Panel Blaster

The side panel blaster directs a concentrated water flow at hard to clean areas such as the rocker panels and wheel wells. A large oscillating spray nozzle applies the Hi-Impact water on both sides of the vehicle in the same pass.

Wheel Blaster

The wheel blaster electronically locates each set of wheels and oscillates as it directs a force of Hi-Impact water against the entire tire and wheel area including the wheel wells.

On board dryer covers

The On-Board dryers are equipped with inlet covers which reduce the noise output of the powerful high volume dryers
